PLATFORM

WEB

The number of and association of devices to users is growing

Isolated app experiences & access

Proliferating platforms ⇒ Developer fragmentation

Explosion of HTML5 Apps coming

The user is identifying more with their platform, the Web and apps then ever before

The Browser & Beyond

Today

A user is an anonymous device, account or user agent

Our technology is built around optimizing the experience

Tomorrow

The user needs to be recognized as an individual, where he is in control over who he is

Our technology puts the user at the center of their experience

BrowserID

Give users the ability to create their own identities

Apps, Home & Sync

Center services and solutions on the user identity (v. the platform or device)

Boot to Gecko

Deliver via a web based platform

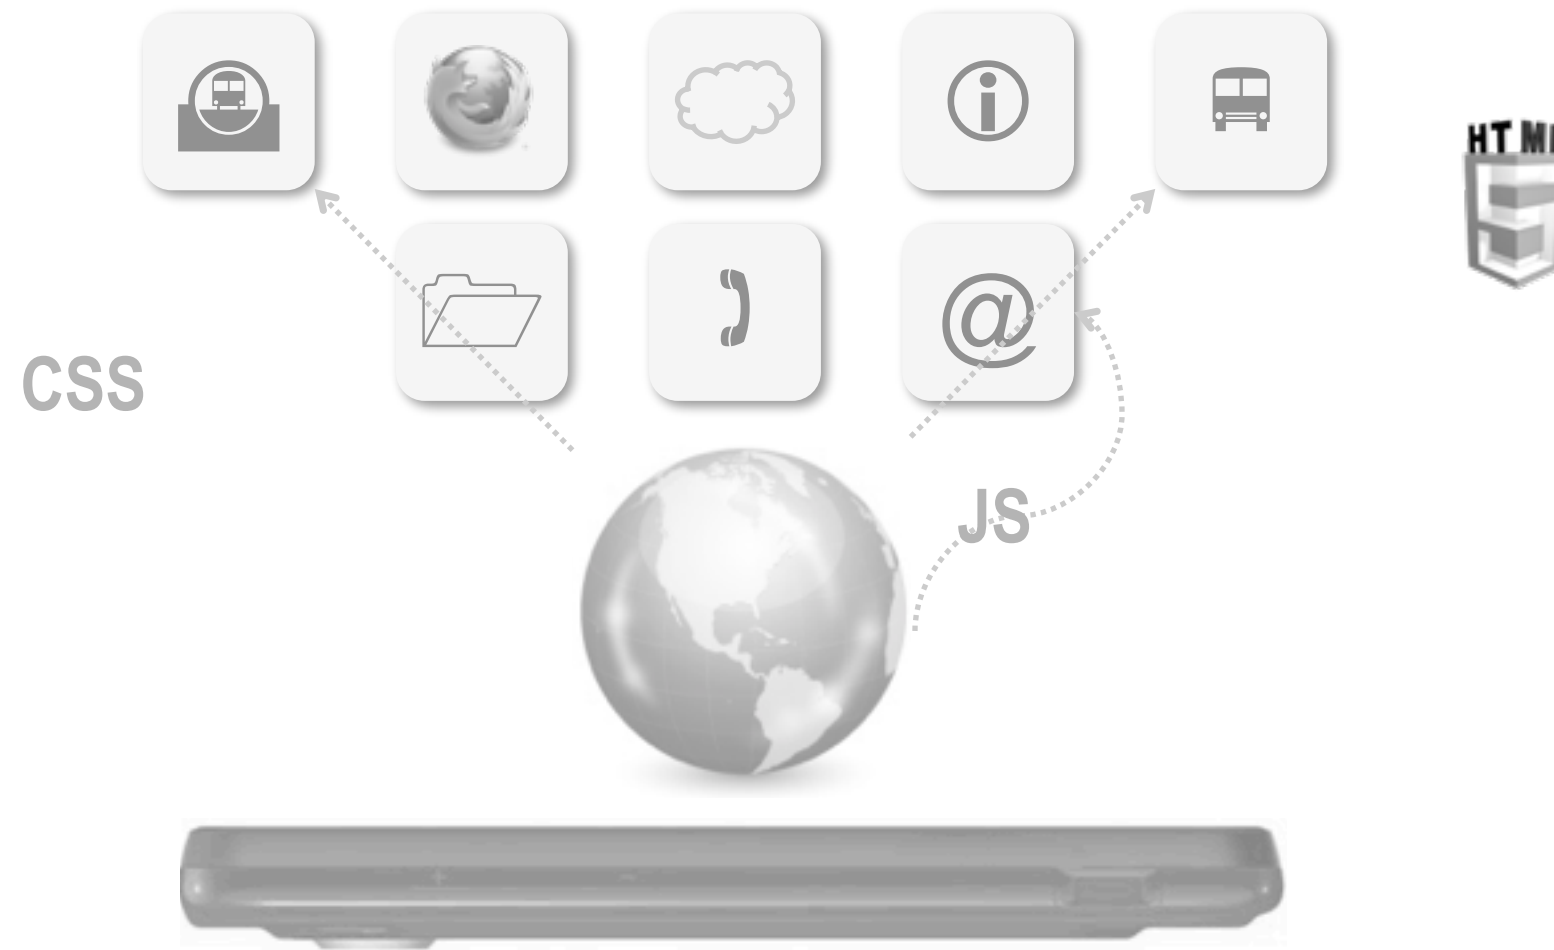

Boot to Gecko – A Mobile Experience Built Entirely on the Web

Tools known by millions of developer

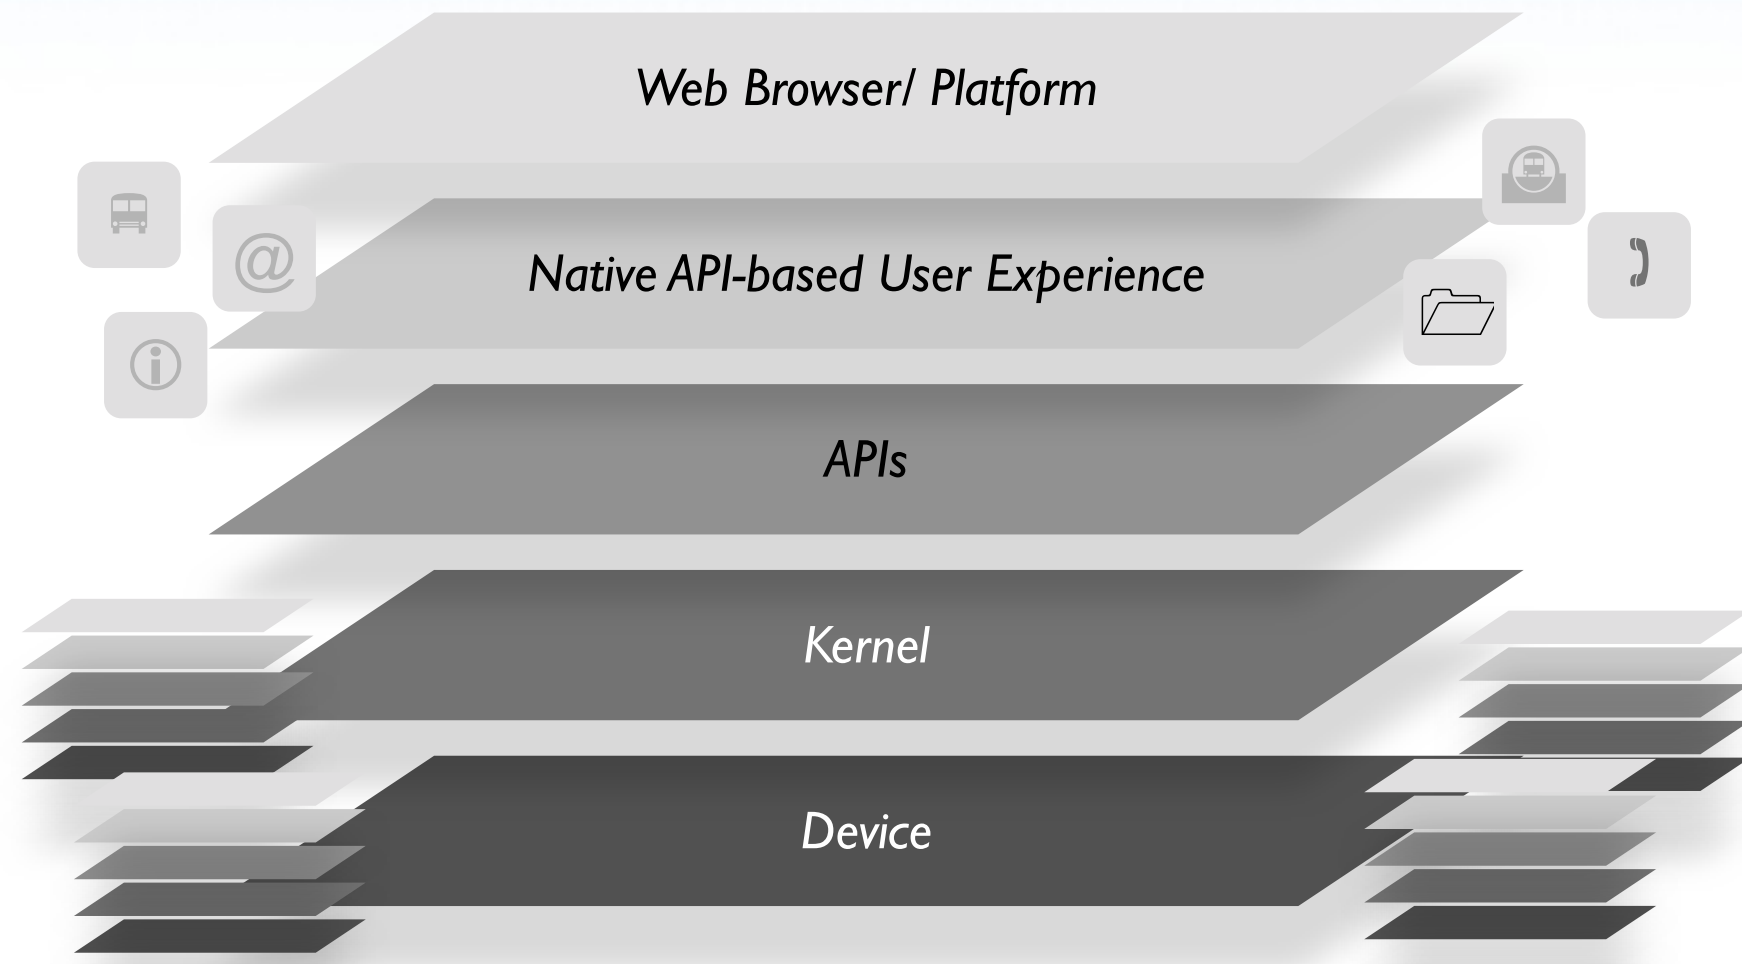

Cross-platform synchronization

Use existing standards

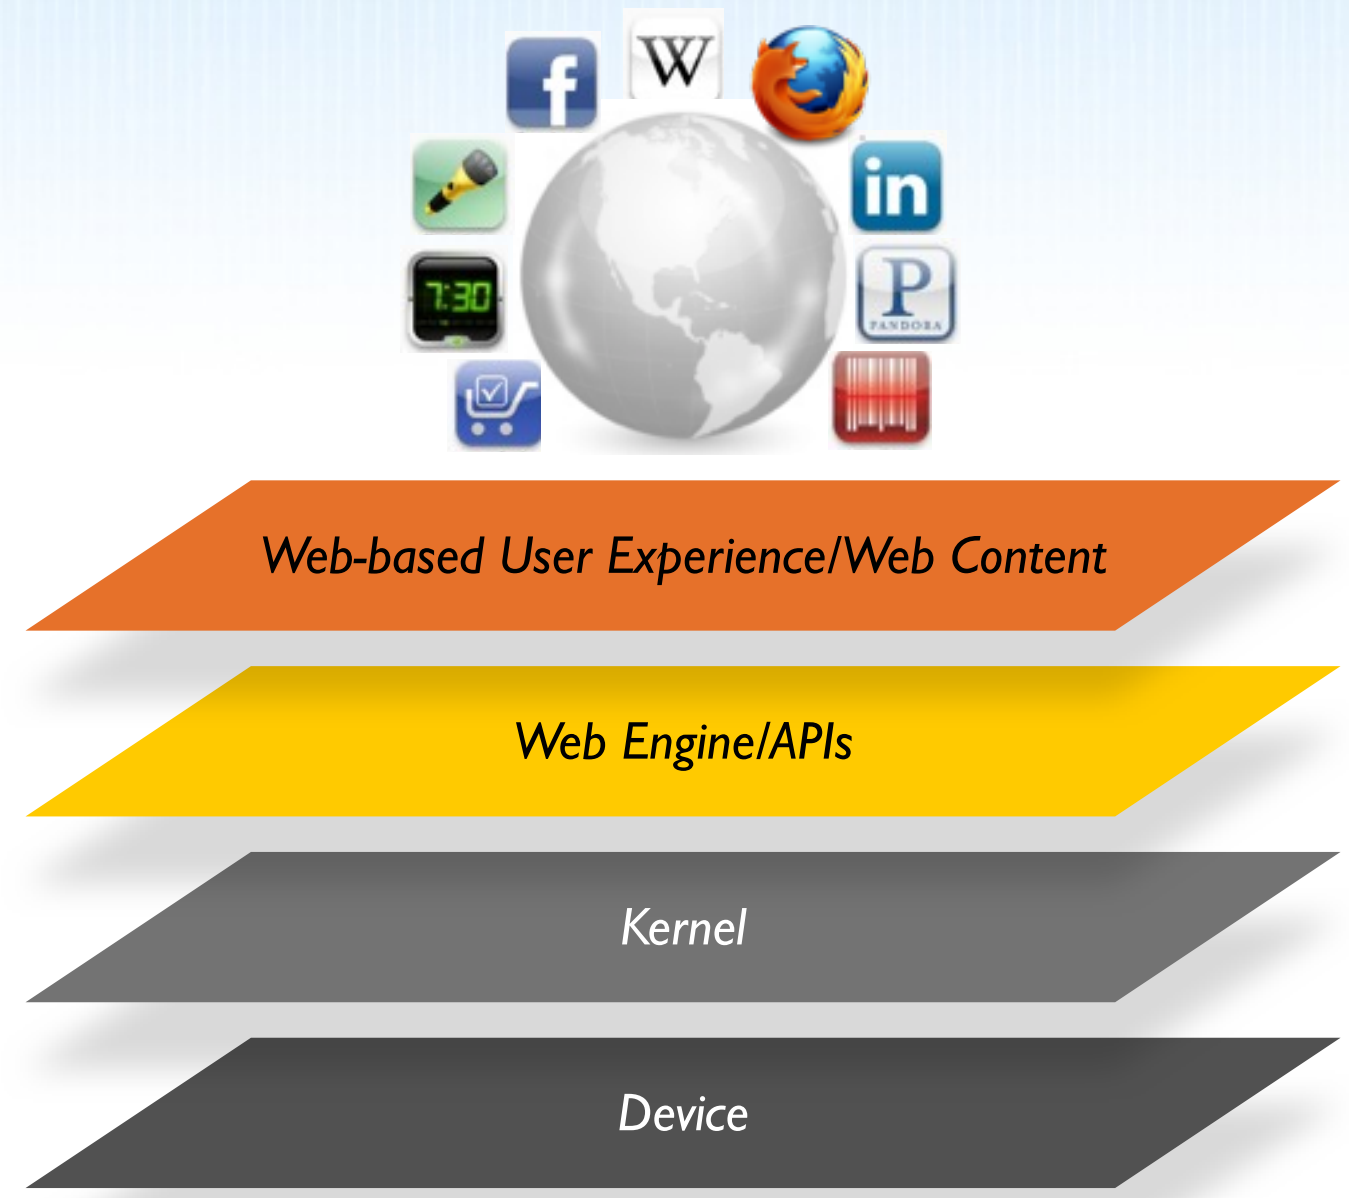

Service differentiation

Boot to Gecko Structure

Today's OS

 **BOOT TO GECKO (B2G)**

Removing the Android layer

Smaller stack, can target high-end feature phones and up
Based on open standards, no single-vendor APIs
Carrier/OEM can deeply customize the user experience

Access to Key APIs and Local Sensors Provide Fully Engaging App Experiences

Hi Jonas, All,

On 24.10.2011, at 20.32, ext Anssi Kostainen wrote:

The DAP group is chartered to spec "an API to manage vibration", and I thought it might be good to start with Mozilla's WebVibrator prototype:

https://bugzilla.mozilla.org/show_bug.cgi?id=679966

The group is planning to look at the Vibration API topic at the TPAC next week, and I could flesh out a draft spec by that time based on Mozilla's proposal to help solicit

Would you like to submit the prototype above as a contribution to this TF, so that we can start specing and soliciting feedback?

During today's call the WG agreed we should publish the first Vibration API Editor's Draft before the meeting next week, and start with Mozilla's WebVibrator proposal. Let's take action [1] to spec it out asap so that people will have time to review it before the meeting.

I think everyone understands the WebVibrator prototype is still unstable and details are likely to change, nevertheless it is helpful to have an early draft available in order

Subject: Webkit Bug 72010 for Vibration API

Date: November 16, 2011 1:06:09 AM PST

To: public-device-apis@w3.org , public-webevents@w3.org

Hi. All.

[+C] Concerning the Vibration API, My colleague, Kihong Kwon, is starting to implement this spec like the webkit Bug 72010 [1].

Hi, [1] https://bugs.webkit.org/show_bug.cgi?id=72010

On Best regards,
Wonsuk.

with Mozilla's WebVibrator prototype:

ft spec by that time based on Mozilla's proposal to help solicit

nd soliciting feedback?

g next week, and start with Mozilla's WebVibrator proposal. Le

Apps

- Foundational platform technologies that enable fast, responsive, secure execution of Web Apps.
- One standard across all device classes (mobile, desktop, embedded).
- A Web App marketplace that will help users discover, purchase interesting Web Apps.
- An Apps dashboard that allows users to find, launch, manage their installed Web Apps.
- A content channel of compelling, high quality Web Apps.

Open Web Apps Marketplace

- Open and transparent for users and developers
- Lead creation of broad open standards for Apps Marketplaces
- Mozilla will create one of many marketplaces. Enable user choice
- Run everywhere the web runs; apps belong to you
- Strong support for web developers
- No-strings-attached Identity
- Deeply integrate Identity and Social
- Content is linkable, sharable, composable, discoverable, beautiful

App Discovery beyond Marketplace

- Vertical App stores have proven to be an effective way to discover and transact.
- Bring discovery back to the Web
 - While you browse
 - In context
 - Through sharing
 - To fulfill a current / specific need“Web Activities” (with Google)
 - And in App Stores
- Make payment systems easy
