# CodeKit

It's like steroids for web developers

- Compiles nearly everything
- Live browser reloads
- Combines and minifies
- Optimizes images
- JSHint and JSLint
- Team collaboration
- Easy frameworks

For more information, see [incident57.com/codekit/](http://incident57.com/codekit/)

# Development Tools

# A More Lickable Web

Don't let **mobile**, **enterprise** or **web** be an excuse for ugly, beauty sells!

## Inspiration

- [www.mobile-patterns.com](http://www.mobile-patterns.com)
- [pttrns.com](http://pttrns.com)

## Human Interface Guidelines\*

- [Android's Human Interface Guidelines](#)
- [iOS Human Interface Guidelines](#)
- [Developing Web Content for Safari](#)
- [User Experience Guidelines for Windows Phone](#)

\* **Use caution:** following only one will look weird on another.

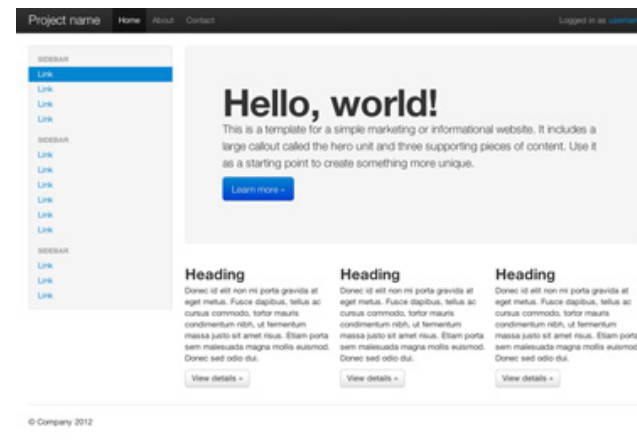

# Boiler Plates

## jQuery Mobile

## Bootstrap

# Helpful Libraries: FT Fast Click

**Problem:** 300ms delay between a tap and the click event firing on mobile browsers.

**Solution:** Track `TouchStart` events and fire a click event as soon as it receives a `TouchEnd` event.

```
window.addEventListener('load', function() {  
    new FastClick(document.body);  
}, false);
```

JAVASCRIPT

[github.com/ftlabs/fastclick](https://github.com/ftlabs/fastclick)

# Helpful Libraries: JSConsole

**Problem:** No debug console on mobile devices without using a remote debugger.

**Solution:** Send `console.log` events to a separate server that you connect to from your desktop.

1. Open <http://jsconsole.com/> on the desktop computer and type `:listen`
2. Paste output into the source for your mobile app
3. ????
4. Profit. Okay, not quite yet.

[jsconsole.com/](http://jsconsole.com/)

# Helpful Libraries: HammerJS

**Problem:** Makes handling multi-touch gestures hella easy!

**Solution:** A 2k library that handles tap, double tap, swipe, hold, transform and drag.

```
var hammer = new Hammer(document.getElementById("contain" JAVASCRIPT
hammer.ondragstart = function(ev) { };
hammer.ondrag = function(ev) { };
hammer.ondragend = function(ev) { };
hammer.onswipe = function(ev) { };
```

[eightmedia.github.com/hammer.js/](http://eightmedia.github.com/hammer.js/)

# Helpful Libraries: Lawn Chair

**Problem:** IndexedDB, WebSQL or LocalStorage, which works best?

**Solution:** Provides a simple API that abstracts away the implementation of each service.

```
var people = lawnchair();  
people.save({name:"Pete", email:"petele@google.com"});  
  
people.all(function(peeps) {  
  peeps.forEach(function(person) {  
    console.log(person);  
  });  
});
```

JAVASCRIPT

[brian.io/lawnchair/](http://brian.io/lawnchair/)

# High DPI Displays

There isn't an **easy** answer yet, but there are options...

```
#my-image { background: (low.png); } MEDIA QUERIES  
@media only screen and (min-device-pixel-ratio: 1.5) {  
  #my-image { background: (high.png); }  
}
```

```
// Only works in Safari & Chrome today. IMAGE SET  
background-image: url(icon1x.jpg);  
background-image: -webkit-image-set(  
  url(icon1x.jpg) 1x,  
  url(icon2x.jpg) 2x  
);
```

```
// Not yet implmented by any browser :( SOURCE SET  
<img alt="my awesome image" src="banner.jpeg"  
  srcset="banner-HD.jpeg 2x, banner-phone.jpeg 640w, banner-phone-HD.jpeg 640w
```

# High DPI Displays

## Best Practices

- Using image replacement is generally frowned upon
- Use vector images or CSS styles wherever possible
- Heavily compressed 2x images often look better than enlarged 1x images
- Use icon fonts like Font Awesome

For more information, see [goo.gl/wjaLT](http://goo.gl/wjaLT)

# Other Helpful Tips & Stuff To Know

- Fingers != mouse pointer
- Avoid: tables, relative positioning, absolute positioning, floats
- Headers and Footers? Use `position: fixed;`
- Scroll inside elements? Use `overflow: scroll;`
- Inertial scrolling? Use `-webkit-overflow-scrolling: touch;` (iOS 5+)

# Testing

# Faking It: Network Link Conditioner

Testing locally doesn't simulate real world mobile networks, but there are tools you can use to simulate them.

- [Charles Proxy](#) [Mac, PC, Linux]
- [Network Link Conditioner](#) [Mac]

# Faking It: Chrome's Dev Tools

Chrome's Dev Tools allows you to over-ride some settings or force certain behaviours like:

- User Agent
- Device Metrics
- Simulate Touch Events
- **Coming Soon:** Geo Location
- **Coming Soon:** Device Orientation
- **Coming Eventually:** Device Pixel Ratio

# Faking it: Emulators

Emulators are a great place to start, but don't give you a complete picture.

- [Android](#)
- [iOS and without running XCode](#)
- [Browser Stack](#)

# Real Thing: Chrome Remote Debugger

## One Time Setup

1. Install the [Android SDK](#)
2. On the mobile device, enable USB debugging at the OS level
3. On the mobile device, launch Chrome. Open `Settings > Advanced > Developer tools` and check the `Enable USB Web debugging` checkbox.

## Debugging

1. Connect the mobile device to computer via USB
2. On the desktop, run `adb forward tcp:9222 localabstract:chrome_devtools_remote`
3. Open the desktop, open Chrome and navigate to [localhost:9222](http://localhost:9222)

See [goo.gl/K2Qhj](http://goo.gl/K2Qhj) for more information.

# Real Thing: Safari Remote Debugger

## One Time Setup

1. On the mobile device, enable the Web Inspector under **Settings > Safari > Advanced**
2. On the desktop, open Safari and open the preference pane, under **Advanced**, check the **Show Develop menu** in the menu bar checkbox

## Debugging

1. Connect the mobile device to your computer
2. On the desktop, click the **Develop** menu bar item, and choose the device you want to debug

See [goo.gl/TLmWW](http://goo.gl/TLmWW) for more information.

# Real Thing: Firefox Remote Debugger

## One Time Setup

1. On the desktop, navigate to `about:config`, search for `remote-en` enable it, then restart Firefox.
2. On the mobile device, navigate to `about:config`, search for `debugger`, toggle `devtools.debugger.force-local` to false and `devtools.debugger.remote-enabled` to true, then restart Firefox.

## Debugging

1. On the mobile device, find the IP address
2. On the desktop, click the `Tools` menu bar item, and choose `Web Developer > Remote Debugger` and enter the remote IP address plus port 6000.

See [goo.gl/pQe4z](http://goo.gl/pQe4z) for more information.

# Real Thing: Open Device Labs

# A Few Favors to Ask!

# Chrome Mobile

## Office Hours

Responsive vs Separate Sites  
with Brad Frost

**What:** Should we create a separate mobile site or create a responsive experience instead?

Join Brad Frost as he takes apart the Obama and Romney campaign websites.

**When:** November 14th, 10:30am ET

**Where:** [goo.gl/r01L6](http://goo.gl/r01L6)

# We ~~Want~~ Need Your Help!

Don't accept the status quo

- File any Chrome bugs you find at [new.mcrbug.com](http://new.mcrbug.com)
- Build a mobile web experiment and submit it at [m.chromeexperiments.com](http://m.chromeexperiments.com) to show off your skills!
- Start an open device lab in your area
- The mobile web is what **you** make of it.

# <Thank You!>
